

Who is this Pippin Barr guy?

Pippin is an experimental game developer who has made games about everything from *Eurovision* to *performance art* to *dystopian post-work futures*. He's an Assistant Professor in the *Department of Design and Computation Arts* at *Concordia University* in Montréal. He is also the associate director of the *Technoculture, Art, and Games (TAG)* Research Centre, which is part of the *Milieux Institute for Arts, Culture, and Technology*.

And what is Devolution?

Devolution is a project exploring the creative processes and challenges of game development. Each Devolution event investigates the evolution of a game by presenting prototypes, interim versions and conversations with developers. In recent years Devolution has offered in-depth examinations of *The Curious Expedition*, *Shift Happens*, *Thumper*, *SUPERHOT*, *Ape Out*, *Hidden Folks*, *Kingdom*, *Baba Is You*, *Dicey Dungeons* and *Lonely Mountains: Downhill*.

It is as if you were playing a text adventure

there's this (fake-ass) sense of switching locations, picking something up, etc. I think there's something to this overall

Journal: Reminding myself of where I am

Mon, 16 Sep 2024 21:22:25

Moving over to the linear story

- Reworked the data and the engine to tell a linear story
- Started thinking about the relationship of delays and timing to text
- Thought about the idea of "preactions" and "reactions"... the idea of an expression of anticipation and then a response to whatever command and output you have
- Because the user THINKS ABOUT WHAT TO TYPE and also then REACTS TO THE RESPONSE TO THAT TYPING
- Oh my GOD I need to have typos
- I'm enjoying this form, but well aware I'm hiding from the real storytelling/writing task
- But when I get there I get there

Tue, 17 Sep 2024 22:14:30

Styling, flow, lorem ipsum

- Spent time making the style sheet look at least partly "nice" or at least "more like

a text adventure"— fixed width font feels like a win somehow, even though I don't think that's the norm?

- Importantly now have the command entered as part of the history which looks right and was one of the things kind of throwing me somehow
- Started thinking about how to write preactions/reactions and noticed that I was being thrown (it's like judo!) by how *short* the placeholders were. I threw in some Lorem ipsum and *that* turned out to be oddly inspiring... the idea of paragraph level texts describing what the player should do unlocks the idea of this being more of a true writing project which I kind of like... a meta story about how to act like you're reading a real story in an IF... it's kind of delightfully fucked up?
- It may turn out to be impossible

A .gitignore for all seasons

- Did this so I can have a secret folder to work in while the story is embargoed
- Important to be able to write freely and with reference to the story so that I can think through writing
- Working on early thinking about how to approach it

Initial commit

Mon, 26 Aug 2024 21:34:39

Initial setup

- Very early html
- Miniature questions like "should there be a menu bar?"
- Looked at Kicker (and thus Inform online) for a basic understanding, but didn't really implement any of that particularly

Sun, 08 Sep 2024 15:28:38

A very basic framework is in place now

- Two commands, one of which yields point
- A history that will build over time (have to pay attention to it scrolling off the bottom)
- A feeling that this may not be a good solution, just going for total randomness, because it would be kind of hard to tell any kind of a story?
- A feeling I shouldn't overthink this... generating commands with a

tracery grammar might be the smartest approach?

- But on the other hand do we want some level of awareness of what's actually around??
- Do I end up secretly creating some part of an actual Inform thing if I do this? Kind of, but also not... maybe I can make a data structure that can generate meaningful and consistent stuff? Kind of like that...

Sun, 08 Sep 2024 15:40:22

Journal: The Basics

Sun, 08 Sep 2024 22:02:03

Very basic "procedural" idea working

- But also not working at all really because it blossoms out into extreme complexity the more I think about it?
- Having my doubts about this approach. I think it's doable but things like picking the probability of specific commands seems daunting having put this little thing together
- BUT I will say that it's for sure really quite satisfying feeling like it works and that

It is as if you were playing a text adventure

Points: 0 / Location: campfire

An Interactive Fiction by Pippin Barr

Release 3.1 / Serial number 415926535 / Unformed 7 build Y0L0

Lorem ipsum dolor sit amet, consectetur adipiscing elit. Etiam vitae justo urna. Phasellus ac nibh nec turpis vulputate facilisis id non mi. Sed at diam vel neque condimentum consectetur. In sed nibh nec ipsum vehicula pulvinar vel ut ex. Pellentesque leo libero, mollis sit amet vestibulum eget, semper sed orci. Morbi enim augue, lobortis eu augue id, egestas ultricies nunc. Curabitur ultrices malesuada sem. Praesent sodales consequat justo, eu accumsan lorem congue in. Pellentesque fringilla urna lacus, vel laoreet elit rutrum vel. Nulla vel nisi lacus.

1. info

It is as if you were playing a text adventure *is an attempt to tell a story through the user-interface of a classic parser-based text adventure.*

3. to-do

2024-09-18

- Bascally fine Fix it so that the history of commands shows up like a normal IF
- Do enough styling so it looks like an IF instead of a piece of shit
- Probably not this, even with Lorem ipsum I'm kind of sold on the idea that there's a way to write something here Consider some kind of styling that looks more like text and the contains the preaction and reactions? Some way to fill the space out a bit more?
- Yes I do want to Or do I want to write more extensively? Is there a writing opportunity here to say more at a meta level...
- For now I think that it's better NOT to have timing introduced Work on the time of pre and re actions as well as the command, give it a more natural flow, consider the relationship of delays to storytelling
- Write one scene (paragraph-level preactions)

Guides for these territories

Michael B

Spent some time just now finishing up the notes I've been taking on  Michael B's novella. Importantly I've also been going back and forth with Michael about how and whether to work with the world of his story in this game. We're both keen on it, I think, but also both a bit trepidatious about the implications— for him whether I'll break or otherwise embarrass the loveliness of what he has; for me... well the same thing, but also the concern of having my hands tied in ways that might make it really hard to progress. It remains a good challenge though.

One thing we kind of both agreed might help was to have as my protagonist someone peripheral who is not in the novella.

I'm thinking about a Janitor. I've been writing poems about janitors for the last few days.

Samuel A

I had a great coffee meeting with Samuel A last week (I think?) where I was trying to get his perspective on the challenge of adapting a novella/world to a text adventure that is actions-only. A strange situation. It was helpful. We settled on a couple of things I think are good (I have an index card somewhere, I should pop it in here):

- The idea of this game as a kind of *mime* act. Specifically relative to the idea that you *can* tell a story through actions and not through the visibility/

legibility of results (except through further actions— well I suppose *reactions* too, but those are somewhat a luxury we don't have in a text adventure? Or do we?)

- The idea of *playing the story to write it* as a way to approach the intimidating writing challenge. That is, to sit down and type a first command and then reflect on what the game would respond, what would happen, what is the result. And writing notes about all this. But at the end only the commands would remain. Because you do, fundamentally, need to *know the story* to tell it; there needs to be a story under there. The mime needs to know how high the invisible wall is to climb it.

So those are two quite practical elements. So practical that one could imagine just beginning. On the other hand it's tough because until Michael puts out his story it's not clear that I can do any of this stuff "in repo" because it would necessarily involve writing out my thoughts about what I'm doing relative to the story.

Now what?

Well the obvious thing is to start trying to play myself in. I have a bunch of notes about the novella from a new reading. I have a glimpse of a setting and even of a key dramatic moment in the story (an evacuation), but not much more. I could try to imagine some fundamental beats and how they'd fit into a text adventure, maybe I need at least the three "acts" in order to comprehend things a little better?

Yeah. And I guess... I just do that "secretly" with a folder in the .gitignore for now.

2. journal

The Basics

Sunday 8 September 2024

I've made a genuine start at this point, two sessions to try to get a basic skeleton of how the basic input-output flow would be able to work.

I've also had a brief conversation with Michael B about kind of piggy-backing on/reacting to a short story of his that I really loved, so that's still in my mind as something to do.

Having made it this far though the next step is really to understand how I should be generating/choosing the sequence of commands for the user to input. In an earlier version of this I'd imagined something more or less like *It is as if you were playing chess* where I'd just have a fixed sequence the user would type it.

And that still makes sense— a lot of sense in some ways because it mirrors the essentially linear nature of stories. That is, there would be a fixed, implicit story being told that the user is perceiving only through the commands they type in as well as any suggested reactions they should have to it.

But I also feel a weird kind of pressure in that scenario where I actually need to understand what is happening moment to moment— there's a need for a real story to exist in that scenario I think. And... well, I suppose that's what

I wanted, a chance to secretly write a story that nobody would actually read?

As I approach it, though, I've also found my brain going the more generative track. What would it take to perhaps generate commands instead, so that different people would have different experiences and we'd be talking more about how you build up an understanding of a world by probing it with commands? Which is *also* interesting.

In that case I've started thinking in terms of a data structure that would represent the *world* in much the same way an Inform story does (rooms, objects, special/relevant commands). And then having a system that would track: where the user is, what they're holding, maybe other status effects if I want to go nutso?

And that is appealing... I gotta say, because there could be some pretty fun serendipity around it? And it's this weird idea of designing some of a game but not all of it? (It would frankly even leave room for freakier stuff like actually letting story bleed in some places, though that sounds a bit much.)

Anyway, that's where we are with this right now. I think I will at least try out the weird structural idea if only because it just seems technically challenging and funny as an idea. A secret structure of a game that only exists to

generate relevant commands is pretty great.

Oh also, I suppose some kind of statistical likelihood thing may make sense? Because you obviously do "look" a lot more than other things and so on?

And some way of creating some more specific "reaction" suggestions for the user? So that they seem a bit more relevant? Shocks versus boredom etc.? Annoyance?

And can you win? It would be really funny if you could technically win?

Further thoughts Sunday 8 September 2024

I spent some more time with this this evening and it's now crossed some kind of threshold where it both seems real (I have two locations, a few commands available) but where it also starts to seem like the contortions involved in a more "simulation" approach may not be all that fun and nor all that important?

There is tension— probably interesting, probably worth reflecting on— between creating something more procedural (leaning more into the "truth" of parser-based IF I guess?) and something more (or totally) linear (leaning more into the nature of story telling).

When I actually "play" what I have so far I think the thing that gives me the best little thrill is, well, just any command input, but especially changing locations (and seeing the location acknowledged in the menu bar) and picking something up... because those are moments where you really feel like you act on the world (unlike looking etc.).

I feel like getting a "realistic" representation of the command sequence in the simulation version might just be

too hard and it might seem too weird without it? Like how do you reproduce the idea that if you enter a room you almost always "look", but not all the time. Or how when you pick something up you might look at it. Or how you often try using all your items on a specific situation.

And it's not even totally about realism there, but also about the narrative potential of those things too? Or of just being able to communicate a state of play... the story of playing sitting on top of the story itself...

So I'm perhaps just talking myself into a version where:

- It's linear... you will just be typing in a set of instructions (which, I mean, who is ever going to replay this!)
- But it includes triggers around location, points, and anything else that could make sense to sort of reflect action through the UI

I briefly thought I'd need an inventory, but I suppose not actually. I'd need to keep track of it personally though.

Hmmm. Yeah well I think I just plow on with the linear version as my next thing, maybe just string together 10-20 commands including a location change to get a sense of what that would feel like? Maybe look at some walkthroughs of *good* IF to see how many commands etc. it might make sense to have? Start stockpiling forms that might be in there ("ask X about Y" for example).

Reminding myself of where I am Monday 16 September 2024

Yes, it has been eight days. Sosumi. It would be nice to round the corner into an understanding of what the screen itself needs so that I can "just" write the

thing. If it's linear is the point to also pre-write all the "reaction" stuff, or should that be drawn from a pool? Or... really, why do that? Might as well use the reactions as a way to further communicate about what might be happening.

The biggest question to me ultimately become: how much do I need to know about what is "really happening" both in the sense of the overarching story being told and the structuring of the parser-based IF that's telling it?

I do like that this is yet another different take on the use of "It is as if" though. Speculative fiction, looking smart on the metro, ... narrative vehicle...

Well but how do I write this then? I suppose first approximation is that each beat needs data, the same data... which would amount to what?

- Input (what they should type)
- Reaction (how they should "act", including instructions on how much to read? Or text padding that lets them read "the right amount"? A shape...)
- Location (to display)
- Points (to add)

Plausibly something else? But also I suppose I should take a look at some walk throughs and some actual IF as some point soon. Maybe that's tonight's little job? Or is it just to put together a teeny draft of the above so I can see what that looks like? Or both, let's see.

Time passes Monday 14 April 2025

Yes it does yes it does. This project was reactivated in my mind because:

- I'm doing this *The Designer Is Present* thing with AMAZE this year and I "need" an *It is as if* game to be working on while I'm there

- Csongor specifically inquired about this project because it's kind of a rare "abandoned" one? But it was only sleeping...

- I'm also (pleasantly) "on the hook" to make a "game poem" for a publication thing that Jordan Magnuson is doing and it occurred to me that Text Adventure is a good option for that, especially in combination with Michael B's *Cornerstone*

All this came together when I was sitting down thinking about the "what next". So in Things I wrote:

- It is as if you were playing a text adventure
- As poetry
- Read Michael B
- Write a lot of poems
- Maybe in that world (or jumping from there)
- Arrange them to imply a trajectory through a game
- The idea of could have been otherwise
- Talismanic objects
- Obtuse npcs
- Implied puzzles
- Repetitions, typos, human elements
- Can the act of playing and typing also fit into the frame?
- Don't forget to put this in the docs

So there are some design leads there too as I try to spin up.

Not on this list but underway is a conversation with Michael B about his feelings about me doing this and especially about me doing this publicly. Right now he's just "Michael B"ing his way around in this docs, but if I got serious I'd want to include the notes I'm taking on *Cornerstone* etc.
